November, 1965

Canadian import data is compiled by the Dominion Bureau of Statistics and is important to the manufacturer for two reasons. First, imports prove the existence of developed, profitable markets in Canada where demands are being satisfied by products manufactured outside Canada. Secondly, import statistics are made public monthly with a time-lag of only three or four months in contrast to the publication of Canadian production figures which lag about eighteen months. Therefore, import statistics provide an early sign of changing demand.

Part I of this booklet contains the annual data on over seven hundred imported commodities and commodity groups. Many of these categories contain hundreds of identifiably different items, any one of which may offer a manufacturing opportunity for Canadian firms. This information is not available on a continuing basis. However, the Department of Industry, in conjunction with DBS, will do detailed import studies upon request.

The new classification system introduced in 1964, provides more information on imports by commodity type than did the system used in prior years, but limits the number of classes which can be compared with earlier periods. Where meaningful comparisons with 1963 classes can be made, they are included.

Imports of the commodity categories through Quebec and Ontario ports of entry can only serve as a guide to the proportion which may enter the Ontario market.

It is not possible to segregate imports by final destination. Products through Ontario ports of entry may be transhipped to Quebec or British Columbia. It is assumed that Ontario is the ultimate user of a high percentage of its own imports and that a significant volume of Quebec imports are destined for the Ontario market, but actual amounts are indeterminable.

Part II shows Canada's imports re-classified into the United Nations' Standard International Trade Classification (S.I.T.C.) at the three-digit merchandise group level. These figures provide a year to year comparison of Canadian imports. They are also directly comparable with similar groups imported by the U.K. and the U.S.

To assist Canadian manufacturers, as well as the manufacturers of other nations, in making a full assessment of the Canadian market potential, the Trade and Industry Branch of the Ontario Department of Economics and Development provides a free advisory service to any firm interested in acquiring new product lines, opening a branch plant, or working out a manufacturing agreement.
